

The relationship between ISO, aperture, and shutter speed is popularly known as the "exposure triangle". Which of the following is correct about the term "ISO"?

- A) The ISO refers to ratings that define the sensitivity level of your camera to light.
- B) The ISO is all about controlling the amount of light that gets to the digital sensor of your camera.
- C) It is the sound that tells you that a photo has been captured.
- D) Higher ISO values mean it is more durable to light.

The correct answer: A
