

Which statement below carries wrong information about telephoto lens and zoom lens?

- A) A telephoto lens makes a photographic subject appear closer than it actually is. This can be ideal for photographers who are unable to be close to their subjects.
- B) Zoom lenses does not have variable focal lengths.
- C) A telephoto lens is a long-focus lens.
- D) Most telephoto lenses range from "medium" (with a focal length between 70 and 200mm) all the way up to "super telephoto" (with focal lengths longer than 300mm)

The correct answer: B
